## BEDDING PLASTER LF

### Product description

Fescon Bedding Plaster LF is a polymer-based bedding plaster for interior walls.

### Applications

- Wall and ceiling surfaces in dry spaces
- Suitable for rock material bases and board surfaces
- The levelling compound cannot be used for floor levelling or as a base for tiling

The product is listed in the portal for building products that can be used in Nordic Swan Ecolabelled buildings.

### Instructions

### Mixing

Refer to the package for how much water the levelling compound requires. Add the dry material to the water and mix with a drill paddle for around one to two minutes. Let the levelling compound stand for at least fifteen minutes and mix it again for a short while. The finished levelling compound remains workable for around one day. The adhesion and wear resistance of the levelling compound can be improved by replacing 10% of the water with Fescon Primer.

### Work instructions

The base must be solid, clean and dust-free, and all substances decreasing adhesion must be removed. Spread the levelling compound on the base either with a levelling spray or a steel trowel. You can recover and reuse any extra compound. When applying several layers of the levelling compound, allow the previous layer to harden completely before applying the next layer. Depending on the conditions, the hardening will take one to two days. If necessary, the dried surface is ground after the application of each layer of levelling compound. The levelled surface can be treated with Finishing Plaster LRF, papered or painted.

### Other considerations

Do not leave the levelling compound in the pumps and hoses for longer than a day. Excess moisture of the structure may cause yellowing of the putty.

### Waste handling

Storage and handling of waste

See the separate storage and disposal instructions <https://www.fescon.fi/en/material-bank>

## Technical information

<b>Material usage</b>	1 mm layer aprox. 1.2 kg/m <sup>2</sup> (full levelling max. 1-3 mm/application)
<b>Water requirement</b>	4.8-5.6 l/20 kg
<b>Type</b>	Powder
<b>Binder</b>	Polymer adhesive
<b>Aggregate</b>	Limestone powder. Limestone powder contains small amounts of quartz, but the weight content of alveolar quartz is less than 1%, so the product is not classified as harmful in terms of quartz.
<b>Colour</b>	Whitish
<b>Maximum grain size</b>	0.6 mm
<b>Package size</b>	20 kg
<b>Storage</b>	Storage time in a dry location approx. 1 year
<b>Layer thickness</b>	1 - 5 mm
<b>Lowest usage temperature</b>	+10°C
<b>Workability time</b>	1 day
<b>Coatability</b>	Painting and papering
<b>Hardening time</b>	Approx. 1 day at +20°C, approx. 2 days at +10°C Drying time depends on layer thickness and the humidity in the drying area
<b>Adhesion strength</b>	> 0.5 MPa (for a concrete surface)
<b>Reaction to fire</b>	A2
<b>Exposure class</b>	RL 01 - RL 03 ( RL 04 with addition of primer)
<b>Emission class</b>	The M1 product meets the EU taxonomy criteria for formaldehyde emissions (< 0.06 mg/m <sup>3</sup> ) and carcinogen emissions (< 0.001 mg/m <sup>3</sup> )
<b>GWP A1 raw material</b>	0,0297
<b>GWP A2 transport</b>	0,0189
<b>GWP A3 manufacturing</b>	0,0044
<b>GWP A1-A3</b>	0,053
<b>GWP A4 transport</b>	0,0158
<b>GWP A5 assembly</b>	0,00251
<b>GWP unit</b>	kg CO2e/kg
