BED SAND HP1000™ FOR STANDARD BOILER CONDITIONS

Product description

Bed sand manufactured from natural sand for standard boiler conditions.
The development of GR-Granuli is based on research conducted jointly by Fescon and the former VTT on the properties and use of blast furnace slag as a fluidized bed material. The research collaboration has subsequently continued with the present-day Eurofins Expert Services. The use of the material has been developed based on laboratory and pilot studies, as well as operational experience gained at power plants.
Grain size
• Available in several different fractions
Packages
• 1 ton big bag
• In bulk

Waste handling

Storage and handling of waste
See the separate storage and disposal instructions https://www.fescon.fi/en/material-bank
